.html). From the first of August and throughout the end of this year, FIFA will be testing the new enhanced 'PES' ball. The ball's new construction, in combination with the revamped PES gameplay, makes it perfect for the new season. FIFA17 has become the most anticipated football video game this year, and it is sure to take on the top spot on the charts come Christmas. Its near flawless graphics and animations, slick presentation, and addictive gameplay all contribute to its success. Players will be able to see the improvements made to the ball in person, as they take to the pitch and make the switch to the new ball. It was reported in June that the 'pulverised-element' would be manufactured using an injection-moulding process. Injection moulding is a high-tech manufacturing process that is seen as being environmentally-friendly. The final product of the ball has been developed to be made up of carbon fibre. It is expected to be lighter than the previous standard ball. It has been reported that this ball will be tested at the World Cup in Russia in two weeks' time. However, the 2018 World Cup has been postponed until the end of this year. FIFA will take this opportunity to test the new ball during this period, and make adjustments if necessary.

A player for Adidas, known as Ticker, told FIFA.com that the new football was a 'once-in-a-lifetime' opportunity. He said: "Players have a lot of responsibility when it comes to making the difference for a game. "We are looking for players who can assist us with that, to come up with something that might be a surprise for others." At least 37 people have died in what might have been the first major test of President Donald Trump's promised plan to end the humanitarian crisis at the southern border.

On Tuesday morning, the Customs and Border Protection agency shared a map on Twitter revealing that more than 500 migrants were found in small groups inside a section of a Border Patrol facility in Clint, Texas. It appears that the group was found in the afternoon of February 18 and several died overnight. The group, which included 22 children and infants, was identified by the CBP as being under the care of the US Health and Human Services Department. The department reported the group's cause of death as 82157476af
